

Twist Grip Safety Handle

Speed and Safety Improvement

For **duo and base** range of tensioners, a quick fit **TWIST** to lock safety handle. It allows easy movement of tools from bolt to bolt, for optimised speed of tensioner operation and adds a layer of protection for the operator by shielding the hose tool connection during pressure

1

Feed hose through handle

2

Snap quick connect hose end onto tool connection

3

Screw Twist-Grip handle onto tool

QUICK

Keep the hose connected on the tool and quickly and conveniently move the tool from bolt to bolt.

EASY

The **TWIST-GRIP** handle can be fitted to any duo, mono and base range tensioner in seconds with our special design screw to connect handle.

SAFE

An operator should never be using the hose/tool connection as a handle. But in a busy operation environment this happens. With **TWIST-GRIP** this connection is now a safe handle that will also protect from any pressure release from the tool manifold or hose connection.
