

ARMOURMAX Protection

ARMOURMAX

TensionPro Hydraulic Tensioners and Hydraulic Nuts now include our unique **ARMOURMAX** surface finish.

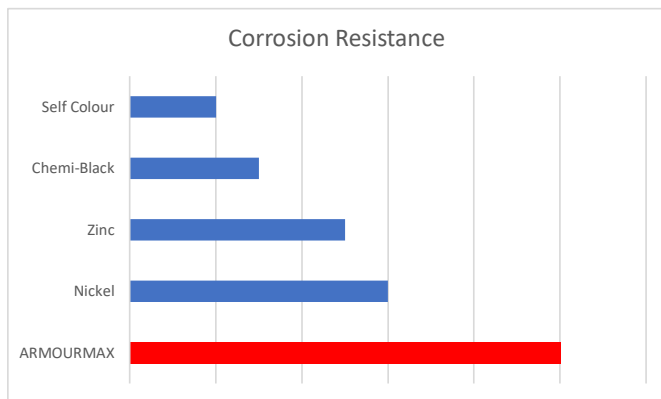

ARMOURMAX gives TensionPro tools a market leading hard, durable anti-wear and anti-corrosion finish.

ARMOURMAX will maximise the life of your tooling and reduce maintenance and down-time.

ANTI-CORROSION

Tested at >800 hours in neutral Salt Spray

FATIGUE RESISTANCE

The ARMOURMAX process leaves residual surface compressive stress in the components to improve fatigue and increase tensioner cycle life.

ANTI-GALLING

Galling is a common issue with tensioning equipment and threaded components. Closely conforming components under-high contact pressure and similar material steels suffer from pick-up and damage. The ARMOURMAX super-hard surface finish protects from galling.

ANTI-WEAR

A deep black finish and anti-scuff and anti-marking extra hard surface finish gives TensionPro ARMOURMAX treated components an enhanced appearance for a life-time benefit of visual appeal and the comfort of having quality equipment.
