

SERIES: HTS-H Hot Operation Tensioners

Temporary Tensioner Operations at 200°C!

HTS series standard range tensioners are versatile and reliable hydraulic tensioners suitable for all bolting applications. Optimised for top-side applications they are perfect for tightening ANSI, ASME and API flanges. With optional **HTS-H** sealing and heat protected hose the tools can now be used for **200°C** temporary operation.

EMERGENCY USE

When a bolting operation is critical and the application is still hot **HTS-H** tools allow quick tooling operation.

NO WAITING

SAVE TIME ON CRITICAL PATH

When the plant is on shut-down and a bolted joint is on the critical path, use **HTS-H** for opening the joint and get a head start.

FEATURES

- Special tool seals for 200°C
- Direct hose connection into tool to remove low-temperature quick connector
- Special heat-shield hose cover protects against heat and fire damage
- Hose shielding also protects against chemical agents
- Suitable for temporary use only
